Add digits

```
class Solution(object):  
    def addDigits(self, num):  
        while num>=10:  
            t=0  
            while num>0:  
                t+=num%10  
                num//=10  
            num=t  
        return num
```

Explanation:

38

38>=10

$t+=38\%10=8 \Rightarrow t=0+8=8, 38\%10=8 \Rightarrow t=8$

$num=38//10=3 \quad num=3$

8+3=11

$t+=11\%10=1, 1\%10=1$

$num=11//10=1$

1+1=2
