

TASK:3/06/2026

1.leetcode-66

```
class Solution(object):  
    def plusOne(self, digits):  
        a=0  
        for i in range(len(digits)):  
            a=a*10+digits[i]  
        a=a+1  
        return [int(x) for x in str(a)]
```

Explanation:

digits = [1,2,3]

d>0

$a=0*10+digits[0] \rightarrow 0+1=1$

$a=1*10+digits[1] \rightarrow 10+2=12$

$a=12*10+digits[2] \rightarrow 120+3=123$

$a=123+1=124$
